

Roller shutters in action

System solutions for the industrial vehicle, rail transport, maritime and industrial sectors.

About us

Roller shutter technology by professionals

RIEKO GmbH is an internationally active company that is part of the POMMIER group. Since its creation in 1963, RIEKO has been developing, manufacturing and marketing roller shutters, drawers and sliding systems in aluminium, stainless steel and plastic.

The company supplies customers in many sectors, notably industrial vehicle manufacturing, mechanical engineering, rail transport and construction/public works, with standard and custom-made products.

The RIEKO® brand stands for exceptional quality and durability. Its products are used wherever the strictest standards apply in terms of reliability and safety. Fire brigades, civil protection and transport companies, including the rail sector, have trusted RIEKO's sophisticated and robust solutions for more than 60 years.

Whether it is a custom design or series production, RIEKO delivers precision down to the smallest details and develops solutions that meet the most complex requirements. The company combines in-depth expertise with state-of-the-art technologies to find the optimal solution to every challenge.

Product ranges and solutions

RIEKO GmbH's headquarters and production site are located in Pliezhausen, Germany. With various surface finishes, RIEKO offers a wide choice of profiles:

- Extruded aluminium
- Rolled aluminium
- Plastic

In addition to standard solutions, RIEKO also develops customised designs. Special widths and heights, difficult installation situations or specific material requirements: RIEKO provides tailor-made solutions that meet even the most stringent requirements. The company creates prototypes, looks for suitable motorisation solutions, combines components and offers support during installation to ensure that all specifications are implemented precisely.

Full service - from planning to commissioning

Perfection begins with attentive listening. At RIEKO, customer requirements and requests are defined in detail already during the planning phase in order to develop the best possible solution. From the initial design and technical development through to installation support and commissioning, RIEKO supports its customers throughout the entire process and ensures that every solution is implemented efficiently, reliably and precisely.

Trust through experience

With more than six decades of experience and a particular focus on quality, reliability and innovation, RIEKO GmbH has established itself as a trusted partner for demanding customers worldwide. The company relies on advanced manufacturing technologies combined with technical expertise, and guarantees solutions that meet the highest requirements, including under extreme application conditions.

Solutions and Applications

Ready to roll

Roller shutters for vehicle construction

Whether for emergency services, fire brigades or commercial vehicles, reliable locking systems are necessary wherever equipment must be accessed quickly while being stored securely. Our roller shutters, drawers and trays offer optimal protection, great ease of use and maximum flexibility. They provide fast access and simple handling, so that your important equipment is always within reach.

Our solutions range from proven standard models to special models tailored to individual needs. Specifically developed for vehicle construction, our roller shutters are easy to operate with smooth movement thanks to precise guidance, even under difficult operating conditions.

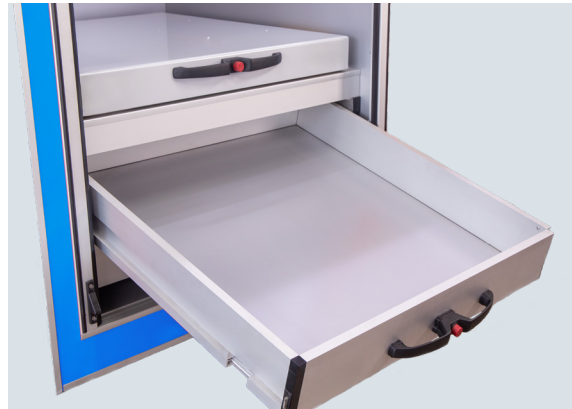

Thanks to precise manufacturing and high-quality materials, we offer durable, functional products that integrate perfectly into different types of vehicles. Our roller shutters are designed to be space-saving and provide ergonomic use without complicated mechanisms. With well-thought-out details and high-quality manufacturing, we ensure that your equipment is always stored safely and quickly ready for use.

Drawers

Our RIEKO aluminium drawers stand for functionality and premium quality. They allow quick and easy access to their contents, at any time and in any place. Thanks to the different possible customisations, we can offer our customers tailor-made solutions to meet a wide range of requirements.

Our drawers can be designed to open horizontally or even at an extreme angle downwards. With a load capacity of up to 120 kg, they offer impressive stability. They can also be customised in width, in height or with special systems to adapt to all installation situations.

Focus on the benefits of RIEKO drawers:

- Quick access for maximum efficiency
- Adaptable to your needs
- Possible configuration of width, height and slide system
- High load capacity up to 120 kg
- Simple handling, even in an inclined position

Telescopic trays

Our RIEKO telescopic trays set the bar higher in terms of durability and reliability. With a dynamic load capacity of up to 400 kg, they are the ideal choice for transporting and safely handling heavy loads. These trays are indispensable wherever stability and efficiency are essential.

Combining impressive load capacity with low weight, our trays are easy to handle. Installation is simple and quick thanks to our proven technology: you save valuable time and reduce your efforts.

Focus on the benefits of RIEKO telescopic trays:

- Low weight for optimal handling
- Simple and quick installation
- High load capacity for the most demanding applications

Rail sector

Solutions and Applications

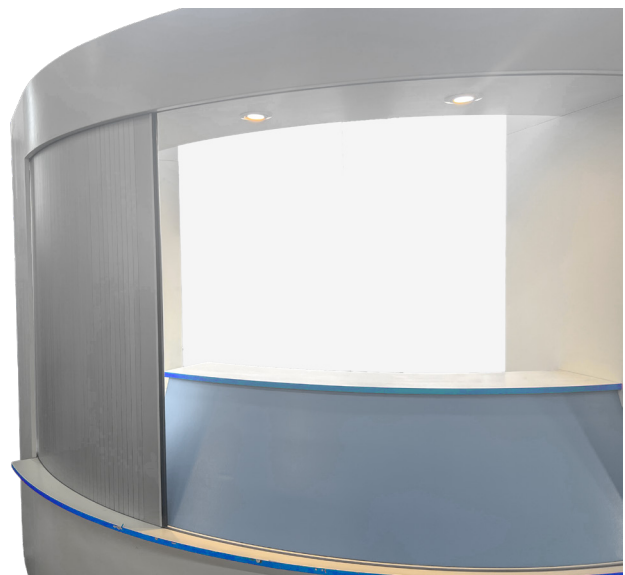

90-degree rotation

Always on track

Horizontal roller shutters for rail applications

When it comes to safe and reliable protection of restaurants, bars, bistros and other onboard areas in high-speed trains, our roller shutters are the ideal solution. They offer not only quick and easy protection, but also make it possible to secure large surfaces effectively, with flexibility. Thanks to our innovative technology and our customisation options, our solutions adapt easily to all requirements and guarantee a high level of functionality in all circumstances.

Our horizontal aluminium roller shutters combine the strictest safety standards with a sophisticated and contemporary design. They offer excellent protection, as well as an aesthetic solution that integrates perfectly into the elegant appearance of modern high-speed trains, which makes them the perfect combination of design and functionality.

Our specially developed roller shutters consist of anodised aluminium profiles that move horizontally along curved guide rails. We use our own state-of-the-art technology here, allowing the rails to be bent without any cutting. This guarantees a flawless appearance while ensuring exceptional durability, even after years of use. The result is a perfect symbiosis between functionality, aesthetics and durability, meeting the high requirements of the rail industry.

We have been working in collaboration with our customers for many years and ensure that we continuously optimise our solutions and adapt them to the latest standards. In this way, we actively contribute to developments and innovations in the rail sector. This ensures that your requirements in terms of safety, design and functionality are always satisfied and that your investment is protected in the long term.

Maritime

Solutions and Applications

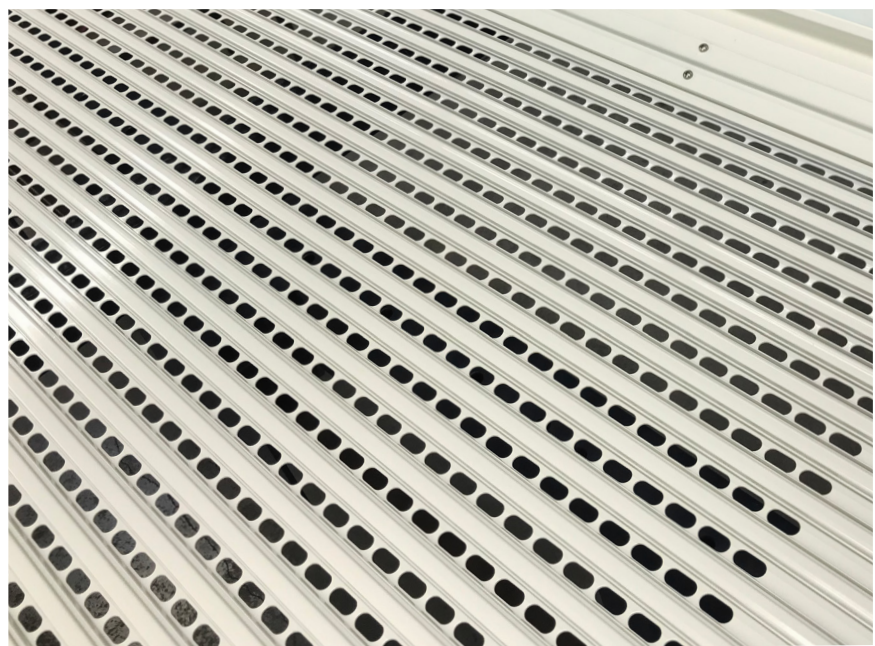

From ship to shore

Roller shutters at sea and maritime applications

Our roller shutters for maritime applications offer a reliable security solution, specially designed for harsh conditions. These roller shutters are notably used on AIDA cruise ships and guarantee effective protection there.

With our many years of experience in the development of horizontal shutter systems, we offer a solution meeting the highest technical requirements. Our maritime roller shutters are made of perforated aluminium with a powder-coated finish. These precise cut-outs give the shutters an aesthetic appearance while promoting air circulation. The combination of design and function is ideal for use in maritime environments.

Our roller shutters are designed for installation lengths of up to 10 metres and offer exceptional durability and robustness. They guarantee reliable performance even in difficult conditions and are perfectly suited to daily use. They are also easy to handle and can be operated quickly and efficiently, which makes them ideal for use in the maritime transport sector.

Your port, fully secured

Roller shutters in port vehicles

For the harsh conditions in which port vehicles operate, we offer tailor-made roller shutter solutions, specifically adapted to the requirements of container terminals. These customised products are ideal for difficult and stressful environments, where port vehicles operate continuously and autonomously.

Our roller shutters are made from powder-coated aluminium profiles, offering optimal protection against corrosion and mechanical stress.

The entire installation is equipped with motors enabling reliable electric control, making use efficient and easy to operate, even autonomously.

By using high-quality components and customising them to meet the specific requirements of our customers, we guarantee exceptional quality, durability and functionality. Our roller shutter solutions are particularly suited to intensive use in container terminals, where reliability and robustness are absolute priorities.

Industry

Solutions and Applications

Unlimited possibilities

Roller shutters for other applications

Our roller shutter systems are not only indispensable in the bodybuilding sector, but are also used in many other sectors. Thanks to their robustness, flexibility and durability, they are ideal for a wide range of applications, from agriculture to mechanical engineering and innovative transport solutions. They offer space-saving, safe and easy-to-use alternatives to conventional doors or shutters and allow quick access wherever necessary.

Mobility

In modern transport solutions, such as last-mile vehicles, compact roller shutters offer a space-saving, lightweight and efficient solution. They facilitate urban transport and allow quick access to the vehicle's contents.

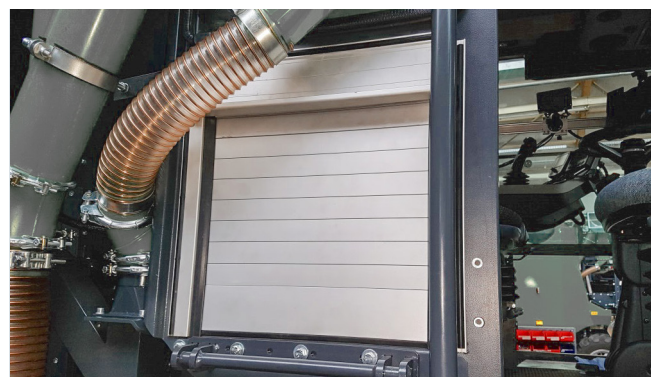

Mechanical engineering

Roller shutters also play an essential role in mechanical engineering. They serve as protection for sensitive components that must be protected from external influences, while offering convenient access when maintenance work or adjustments are required. Their space-saving design is particularly suited to working environments where conventional doors or shutters would take up too much space.

Agricultural technology

In the agricultural sector, roller shutters replace conventional shutters and guarantee quick and simple handling. They offer a reliable solution for machines where easy access to important components is needed.

Body construction

Another example is the metal accessory box equipped with a robust RIEKO roller shutter. These boxes offer a reliable solution for the storage and secure transport of objects in different vehicles. The roller shutter is not only an effective way to protect the contents and facilitate access, but also ensures high stability and a long service life for the box.

Furniture manufacturing

Roller shutters are an important design element and a practical solution for modern furniture. They are used in schools, offices, catering establishments and workshops.

Our sophisticated roller shutter systems feature high-quality decorative finishes and fitted rails that can be shaped as required. Our furniture roller shutters offer quick access to storage volumes, equipment and tools, while protecting them against theft.

Quality products require suitable processes.
RIEKO GmbH is certified according to DIN EN ISO 9001:2015.
